Notes

Urbaco the company

Urbaco is the undisputed market leader for access control systems thanks to its retractable bollards. The company is constantly developing products and services to meet numerous, prestigious orders worldwide. Its cutting-edge technology is quality certified. Besides its products, systems and proposed global solutions, Urbaco, through its network of business partners, is always looking to improve its offer of services (i.e. research and development, after-sales service, maintenance and training) to deserve the trust of its customers.

The complete range of Urbaco products represents the best offer available on the market when it comes to retractable bollards and accessories. This is true since it meets all the needs in terms of management, traffic regulation, safety, but also aesthetics: our product range blends in perfectly with modern requirements. The toughness of the materials we use – cast iron, steel and stainless steel – is a guarantee for even the most frequented of areas.

index

From an aesthetic point of view, the appearance of cast iron products may show some unevenness: this is not a flaw, but rather, a feature of the materials.

The technical specifications are merely indicative and non-binding. For exact dimensions and measurements please refer to our product specs and technical data diagrams which are provided on request.

Urbaco quality

Urbaco's requirements in terms of quality and the expectations of our customers are what make us test and live up to the quality of our products and processes, and their legislative compliance.

Quality is always a priority for Urbaco. To this end, we have initiated an integrated quality and environmental management system.

Urbaco quality

Legislative compliance

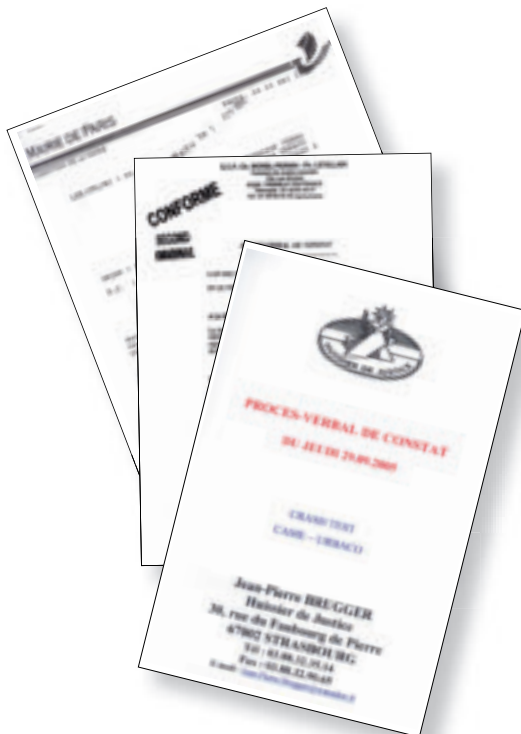

Urbaco retractable bollards, comply with French law NFP 98-310. Retractable Energy dispensing units: compliant with 72/73/EEC directive.

Crash test

Urbaco bollards are so sturdy and reliable that they manage to protect access even during attempts at forced penetration.

Product testing

There are numerous tests:

- bollard duration testing (approved by the bailiff). Testing is done on two bollards, continuously for 24 hours, 4,500,000 up and down cycles with no breakdowns or need for parts replacement.
- testing on impact resistance on retractable bollards made by the Street Testing Laboratory for the City of Paris: Urbaco bollards score a resistance coefficient that ranges from 2,500 to 15,000 joules depending on the models.
- testing on impact resistance made in 2005 on Generation 6 automatic retractable bollards. A bollard (with 250 mm diameter, 500 mm height) resists the impact from a 1.2 tonne car travelling at 50 km/h, and a bollard (with 250 mm diameter, 750 mm height) resists the impact of a 2.5 tonne vehicle travelling at 55 km/h.

New

Retractable Ovalie

Our latest addition is called Ovalie!

This is Urbaco's latest creation: a retractable bollard featuring special, modern design. This product associates Urbaco reliability with design refinement; hardly invasive, it is suited for any urban setting. Ovalie features a diameter of 120 mm and a height of 500 mm; it comes in 4 versions: automatic or mechanical retractable, fixed or removable. This model belongs to the "Generation 6" series and features a electropneumatic power-drive and a Monobloc® structure. All external parts are made of nodular cast iron and have an average thickness of 11 mm. Ovalie: another Urbaco success!

New

City6

City 6 strengths:

- new aesthetics;
- the ample front panel enables numerous accessories to be integrated: proximity sensors, videos, interphones, displays, printers, coded keypad, traffic light (65 mm diameter), call button;
- reinforced anti-corrosion treatment: thermohardening polyester powder, matte finish;
- vandal-proof lock.

New

City3 Stainless

The City3 is also available in stainless steel!

The new City3 is the ideal controller for modern settings. Yet its design is also perfect for the more prestigious historical sites.

Characteristics

- Material: stainless steel 316 L
- Overall dimensions: 150 cm x 32,5 cm
- Door with lock
- Door with lock to access the emergency stop button
- Front panel made of screen printed polycarbonate
- Red and Orange LED traffic lights
- Base made of galvanised steel
- Sound and thermal insulation

Possible command devices

- Coded keypad
- Radio receiver
- Analogue and digital intercom
- Proximity sensor
- Video

New

Luxor

Luxor is ideal for large-volume private user applications and for public administration settings: business centres, supermarket chains, car dealerships, and historical town centres where elegance cannot be trump public safety and security. In fact, an acoustic warning device notifies that the pneumatic Luxor bollard is moving, to prevent accidental collision with unsuspecting pedestrians and bicycle riders. And in contexts where regulating vehicle flows also means safeguarding the environment to cut back on exhaust fume emissions, Luxor is environmentally friendly! Luxor is loaded with technological features, while providing the customary Urbaco reliability plus and optimal price-quality ratio.

The complete range

Automatic - hydraulic version

Génération 6 series for standard use

Tradition series with illuminated ring

High Security series for optimal protection

Automatic - pneumatic version

Génération 6 series for standard use

Tradition series with illuminated ring

High Security series for optimal protection

Access control system

Indispensable for access controls managed by retractable bollards, our systems are equipped with integrated command devices, electropneumatic power-drive and luminous signalling.

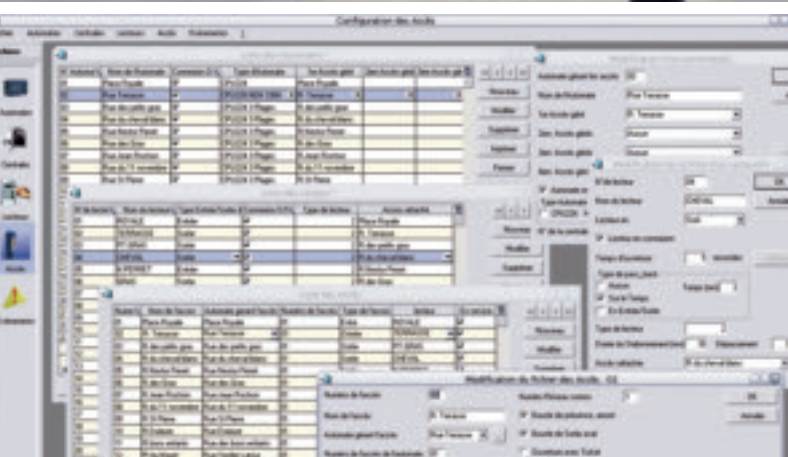

Controller:

City 1* - City 3 - City 5 - City 6 - Technical centres**

Armoured cabinets**

*City1 cannot integrate bollard motoring or management systems

**The technical centres and armoured cabinets do not include luminous signalling

Centralised technical management system

Sygma II: Centralised card management software.

Street furniture

The range of Urbaco outdoor furniture is made up of benches, litter bins, tree grilles, posts, public ashtrays and barriers, all designed to fit in naturally and harmoniously into any urban setting

Mechanical retractable bollard

Mechanical retractable bollards are the ideal access management solution in public or private streets and to reserve car parking spaces. They are employed when the situation does not require intensive service. Easy to use, they are released by key and ascend automatically

Removable bollard

Removable bollards are a simple, effective solution when managing access-ways that are only occasionally opened. The design is the same used for retractable, automatic and fixed bollards

Fixed bollards

Fixed bollards enable you to section off a pedestrian area. They come in numerous models, and are easily integrated both in modern as well as classic settings

Energy dispensing units

Available in both the fixed and retractable versions, it dispenses energy or utilities such as power, water, compressed air, and mobile phone services

For retractable bollards

Other RAL colours	
TPRALBEX	RAL 4 numbers

**Other colours excluding RAL**

TPUGA	Anthracite grey
TPUGR	Steel grey

All our cast iron products undergo a zinc treatment coating. They are painted RAL 7016 structured as a standard (TPUGU).

Automatic retractable bollards

Example of an automatic bollard

Automatic retractable bollards are made to manage access to both public and private streets. They retract below ground using a remote device (i.e. remote control, proximity card, digital code, etc.) clearing the way for access.

They ascend, either automatically or using a remote control, once a vehicle has driven over and past them.

Automatic and hydraulic power-drive

- **Génération 6** series for standard use
- **Tradition** series with illuminated ring
- **High Security** for optimal protection

Automatic and pneumatic power-drive

- **Génération 6** series for standard use
- **Tradition** series with illuminated ring
- **High Security** for optimal protection

Génération 6 Automatic retractable bollards

Automatic retractable bollards are made to manage access to both public and private streets. They come in two versions: "BEA" (Automatic Retractable Bollards) and "BEM" (Mechanical Retractable Bollards). The BEA version retracts below ground using a remote control device (i.e. remote control, proximity card, digital code, etc.) clearing the way for access.

Génération 6

Urbaco's sixth generation of retractable bollards are the fruit of over 20 years of experience. These bollards are made up of only three elements: case, cover and bollard head - each being cast into one, single piece, made of nodular cast iron, and free of any parts that could wear down - an Urbaco Monobloc® patent.

14

Hydraulic version

Extra boost and high resistance to vertical loads when fully extended thanks to the non-compressing nature of the liquid.

Or the pneumatic version

Reliable, simple and long lasting. Works using low pressure, compressed air (several bollards can be run by a single technical centre).

Compliant with
French Law NFP98-310

Example of an automatic bollard

Coloured surface finishing coat

The main standard coating is zinc which provides better adherence for the finishing coat of thermo-hardening polyester powder varnish with a matte finish - the standard colour being RAL 7016 anthracite grey

Warning system

Visual warning device consisting of a white, class II reflective band (the Vendome model uses a yellow band)

Models

In nodular cast iron with an average thickness of 11 mm, for the Châteauneuf model

Bollard head

Cast into a single block, it integrates its own sliding rail and is designed to slide without wearing down. Only minor periodic maintenance and adjustments is required. Made of extremely durable and resistant nodular cast iron

Cover

It helps preserve the bollard, its long cladding distributes the bollard's energy into opposite components, transmitting it to the buried foundation box. A thick plastic ring eases the sliding of the bollard head, thus reducing friction and noise

Case

With a thickness of up to 24 mm, it is fitted with 4 guides and a separate Monobloc bar which holds a pneumatic or hydraulic jack in place. This ensures that the guide rails will not deform

Lost casing

Urbaco's lost casing, made of 1.5 mm thick galvanised, metal sheeting is delivered already folded. This allows you to save space and makes for easier maintenance and stocking. Its easy mounting is indispensable for optimal installation

Retractable automatic bollards Luxor

Luxor is ideal for large-volume private user applications and for public administration settings: business centres, supermarket chains, car dealerships, and historical town centres where elegance cannot elude public safety and security. In fact, an acoustic warning device notifies that the pneumatic Luxor bollard is moving, to prevent accidental collision with unsuspecting pedestrians and bicycle riders. And in contexts where regulating vehicle flows also means safeguarding the environment to cut back on exhaust fume emissions, Luxor is environmentally friendly! Luxor is loaded with technological features, while providing the customary Urbaco reliability plus and optimal price-quality ratio.

Example of an automatic bollard

New head design

The head design of the cast iron bollard is conceived to appear aesthetically more pleasing when the bollard is retracted because it integrates perfectly with the road surface

Illuminated ring

The new illuminated ring is made up of 12 highly luminous diodes that constantly warn of the bollard's presence, day or night

Acoustic warning

The acoustic warning ensures safety for pedestrians walking past the bollard's area of operation

Galvanised bollard head

The varnish on the bollard head comes in all RAL hues and the additional treatments ensure exceptional colour adherence even in extreme conditions

Cover made of nodular cast iron

Lost casing

Made of 10/10 galvanised steel sheeting, it enables quick and practical installation thanks to its light weight

Luxor: the applications

Automatic retractable bollards

Tradition fitted with illuminated ring

Tradition, the retractable bollard is used when the highest-level of visibility is needed from a bollard even when conditions are not optimal. Fitted with a red-LED illuminated ring (white LEDs are available on request) which are fully visible at night and during the day. It is ideal for all areas of application with the same common denominator: managing one or more access ways.

Tradition

The automatic retractable bollards of the Tradition series are made up of four elements; case, cover, rail and bollard head. Each piece is cast into a single block of nodular cast iron - An Urbaco Monobloc patent.

Compliant with
French Law NFP98-310

Example of an automatic bollard

Models

It comes in three different models: the Acropole and Cylinder are made of nodular cast iron. The Vendome model is made of stainless steel

Warning

The standard issue, red-LED illuminated ring is your guarantee for high visibility levels; day and night

Surface finishing and colours

The main outer coating is zinc, which provides better adherence for the coating, along with a matte finish thermo-drying polyester powder varnish, in standard RAL 7016 anthracite

Bollard head

Made of nodular cast iron, it slides along an extremely sturdy rail which is wear and tear resistant, thus cutting out the need for maintenance and repairs

Cover

This ensures long-term protection to the bollard, its long cladding distributes the bollard's energy into opposite components, transmitting it to the buried foundation box. A thick plastic ring eases the sliding of the bollard head, thus reducing friction and noise

Case

With a thickness of up to 24 mm, it is fitted with 4 guides and a separate cross bar which holds a pneumatic or hydraulic jack in place. This ensures that the guide rails will not deform

Electro-hydraulic power-drive

Extra boost and high resistance to vertical loads when fully extended thanks to the non compressing nature of the liquid

Electro-pneumatic power-drive

Reliable, simple and long lasting. Works using low pressure, compressed air (several bollards can be run by a single technical centre)

Lost casing

Urbaco's lost casing, made of 1.5 mm thick galvanised, metal sheeting is delivered already folded. This allows you to save space and makes for easier maintenance and stocking. Its easy mounting is indispensable for optimal installation.

19

Tradition: the applications

Automatic retractable bollards

High security

Engineered to ensure security at strategic access points against 'Ram' impacts, our High Security bollards meet the most stringent requirements in terms of access management and impact resistance.

High Security

Our High Security automatic retractable bollards are made up of four elements: the case, double cover, rail and bollard head. Each piece is cast into single nodular cast iron block - the Urbaco monobloc patent. The double cover increases the impact resistance factor. Over a one-quarter of the bollard's length is clad by the cover.

Compliant with
French Law NFP98-310

Example of an automatic bollard

Models

Available in two different models: the Cylinder type steel and the Vendome type steel + stainless steel - starting with a 10 mm tube for the electro-pneumatic versions and a 20 mm tube for the electro-hydraulic versions

Warning system

Visual warning device consisting of class II reflective bands

Surface finishing and colours

(for the Cylinder models)

The main standard coating is zinc which provides better adherence for the finishing coat of thermo-hardening polyester powder varnish with a matte finish - the standard colour being RAL 7016 anthracite grey

Bollard head

Made of 10 to 20 mm thick steel, it provides very high levels of mechanical resistance

Double cover

It helps preserve the bollard, its long cladding distributes the bollard's energy into opposite components, transmitting it to the buried foundation box. A thick plastic ring eases the sliding of the bollard head, thus reducing friction and noise

Case

With a thickness of up to 24 mm, it is fitted with 4 guides and a separate cross bar which holds a pneumatic or hydraulic jack in place. This ensures that the guide rails will not deform

Guide rail

Non-deformable, while ensuring a smooth, wear and tear free guide, which cuts back on maintenance and adjustments

Hydraulic power-drive

Extra boost and high resistance to vertical loads when fully extended thanks to the non-compressing nature of the liquid

Pneumatic power-drive

Reliable, simple and long lasting. Works using low pressure, compressed air (several bollards can be run by a single technical centre)

Lost casing

Urbaco's lost casing, made of 1.5 mm thick galvanised, metal sheeting is delivered already folded. This allows you to save space and makes for easier maintenance and stocking. Its easy mounting is indispensable for optimal installation

New

The Ovalie automatic retractable bollard

Our new born product is called Ovalie. Ovalie brings a touch of 'modern' to the city! Urbaco's latest creation: carefully designed, modern retractable bollard. This product blends Urbaco's traditional reliability with refined design features. It is minimally invasive, and suited for any urban setting. Its diameter and height are 120mm and 500 mm respectively; it comes in 4 versions: automatic or mechanical retractable, fixed or removable. This model belongs to the "Génération 6" series, and features pneumatic power-drive and Monobloc® structure. All external parts are made of nodular cast iron and have a thickness of 11 mm. Ovalie: another winner from Urbaco!

Complies with
French Law NFP98-310

Example of automatic bollard

Case

With a thickness of up to 24 mm, it's equipped with an integrated Monobloc bar which holds in place the pneumatic or hydraulic jack. The parallelism of the guide rails is guaranteed against warping

Surface finishing and colors

The main standard coating is zinc which provides better adherence for the finishing coat of thermo-hardening polyester powder varnish with a matte finish - the standard colour being RAL 7016 anthracite grey

Lost casing

Urbaco's lost casing, made of 1.5 mm thick galvanised, metal sheeting is delivered already folded. This allows you to save space and makes for easier maintenance and stocking. Its easy mounting is indispensable for optimal installation

Negative safety Electro-valve for BEA Luxor

item code BOEVB-LUX

Positive safety Electrovalve For BEA Luxor

item code BOEVP-LUX

Technical centre management system

Urbaco's technical centres are made for automatic bollards and afford complete and functional installation, in terms of the originality of their components and the maximum extension potential of their devices. In fact, the electronics are different and specific, depending on whether the bollards are driven hydraulically or pneumatically. The centres also afford both management and control of several bollards, either simultaneously or singularly with all of the necessary control and safety devices.

Access control systems

Access control system for intensive use

A controlled access way is usually made up of:

- one or more automatic retractable bollards which, installed on the vehicle path, allow or restrict access;
- A management system (Micro technical centre for intensive use, City 3 or City 5 controller) that receives instructions from the user (via transmitter, proximity card, button, coded keypad), to manage operation of the access way (a software handles the opening or closing command depending on the programming) and provides the energy needed to operate the bollards (i.e. pneumatic compressor or hydraulic unit). To this equipment you can also add several safety loops (for electro-magnetic detection) which, placed under the road surface, on either side of the bollards, tell whether a vehicle is present or not. There are two or three of these loops depending on the functioning logic of the access way: controlled entrance, controlled or automatic exit. A loop can serve as either a vehicle detector when said vehicle is positioned over it (and allows a transmitter, proximity card or other to clear the vehicle for entrance, or as a safety loop for vehicles regardless of the direction of travel (the access way stays open, the bollard is in the down position until the loop is disengaged), or as both functions.

Access way management: the applications

Functioning logics

1

1 Controlled entrances or exits: two loops, one or more bollards that work simultaneously, one road, one passage way (permitting entrance but no exit). The vehicle engages the external (vehicle present/safety), the user commands the retraction of the bollard (via transmitter, proximity card, button, or coded keypad), the vehicle travels beyond the bollard and the internal loop (safety). The bollard surfaces automatically after the vehicle has passed over the internal safety loop.

2

2 Controlled entrance and exit ways: two loops, one or more bollards that work simultaneously, one road, two directions of travel for both the entering and exiting vehicle. The vehicle stops on top of either the internal or external loop (presence/safety), the user commands the bollard's retraction (via transmitter, proximity card, button, coded keypad etc....). The vehicle travels beyond the bollard and the internal or external loop (presence and safety). The bollard surfaces automatically when the vehicle has travelled beyond the outer safety loop.

3

3 Automatic exit: three loops, one or more bollards that work simultaneously, one one-way road. The vehicle stops over the internal presence detector loop, and then on the internal safety loop; when it is straddling the two loops, the bollard automatically retracts; the vehicle travels beyond the bollard and the external safety loop. The bollard automatically surfaces when the vehicle has driven over the external safety loop.

4

4 Controlled entrance and automatic exit: three loops, one or more bollards that work simultaneously, one road with two directions of travel. The entering vehicle stops on the outer loop (presence and safety), the user commands the bollard to retract (via transmitter, proximity card, button, coded keypad), the vehicle drives beyond the bollard and internal safety loop. The bollard automatically re-surfaces once the vehicle has passed to internal safety loop. The vehicle stops on the internal presence loop, and then on the internal safety loop; when it is straddling the two loops, the bollard automatically retracts, the vehicle drives past the bollard and the external safety loop. The bollard automatically re-surfaces when the bollard has driven past the external safety loop.

5

5 Commanded entrance and/or exit: configuration without safety loop (basic or standard micro technical centre). The vehicle stops in front of the bollard, the user commands the bollard to retract, the vehicle drives past the bollard which stays in the retracted position until the user commands it to re-surface.

6

6 Commanded entrance and/or exit: configuration with safety loop (Standard micro technical centre). The vehicle stops in front of the bollard, the user commands the bollard to retract, the vehicle drives past the safety loop and bollard, then commands the bollard to re-surface. Thanks to the safety loop, the bollard cannot re-surface even if the user commands it to do so as long as the vehicle is still stopped above the bollard.

U200 Pneumatic micro technical centre

A management system that receives instructions from the user. The command devices may be either integrated or remote through a control station: City 0, City 1. The system can manage two access-ways (a software program manages the opening and closing command depending on the programming) and provides the power needed to operate the bollards (pneumatic compressor).
INTENSIVE USE.

Body of technical station

Protection rating:	IP44
Power supply:	230V mono, 16° + ground
Current draw:	2.6 A
Power:	500 W
Duty cycle:	100%
Temperature:	-10°C + 55°C
Ventilation:	forced 230V
Steel plate thickness:	1,5 mm
Dimensions:	600 mm x 400 mm x 250 mm
Insulation:	Class II, sound and thermal
Closing:	standard key lock
Wall fixing:	box supplied with a pair of bolts for wall mounting
Standard colours:	RAL 7035 - Light Grey

Internal devices

U200 Card
 - manages Urbaco endstops,
 - manages magnetic coils,
 - monitors the compressor,
 - manages dry-contact command devices.
 Bollard heating device

Intensive micro-compressor

For intensive and maintenance free use electro-pneumatic power-drive

Luxor technical centre: “Standard” and “Plus”

The Luxor bollard is engineered to allow it to be connected in Standard or Plus configuration with the new Urbaco technical centres, which are specifically for pneumatic retractable bollards. Entirely polyvalent, they allow management of different installation configurations. They are protected by the new, anti-rust, varnished steel cabinet which is suitable for all climate conditions.

The standard issue for the new centres includes:

- New 800 x 600 x 300 mm varnished steel cabinet
- U200 control board
- Intensive use compressor
- Certified 10 litre air supply with safety valve
- Pre-fitted to take coil detectors
- Central pre-cabling
- Built-in radio receiver
- Pressure switch, safety valve and gauge
- 2 bi-channel transmitters
- Endstop management
- Positional traffic light management

These following additional accessories complete the standard issue:

- Automatic condensation discharge valve
- Additional card for controlling a supplementary access-way (up to three access-ways for each Plus station)
- magnetic coils
- Thermostat and heating device
- Ground fixing base
- Cooling kit

Currently **two models** are available:
Standard configuration: basic
Plus configuration: like Standard plus acoustic insulation

Control panel

DIN bracket for terminals

Specific hydraulic centre

INTENSIVE USE

The specific centre is a system which allows to put together the control panel and the power-drive system made up of a high-pressure hydraulic unit. This system perfectly meets high security needs. It can include the radio receiving system or function with a remote access control. The armoured cabinet can handle several access-ways depending on the type of configuration requested by client.

After careful project research is carried out, installation of the following takes place. Electric safety devices, manufacturer's programmable software, availability of hydraulic units (from one to three).

Hydraulic unit capacity data sheet				
	Number of Generation 6 bollards		Number of High Security bollards

Management systems controllers

Urbaco controllers are designed for automatic bollards and allow for complete and functional installations to be realised; this is true in terms of potential and maximum extension of their devices. The electronics are in fact different and specific depending on whether you are dealing with pneumatic or hydraulic bollards. The controllers allow you to manage and operate several bollards simultaneously or singularly and are fitted to be integrated with all the necessary extensions in terms of control and safety. They integrate perfectly with urban settings thanks to the variety of models on offers.

Controller City 6

The City 6 controller is a management system that gets its instructions from the user (via transmitter, proximity card, button, coded keypad etc...), to manage the functioning of one or two access-ways (a software program handles the opening or closing command depending on how it is programmed) and provides the power needed to operate the bollards (pneumatic compressor or hydraulic unit). The strong points of City 6.

Standard:

- wide customisable front piece can be integrated with numerous accessory devices: proximity readers, video, interphone, display, printer, coded keypad, traffic lights (diameter 65 mm), calling button...;
- new design;
- reinforced rust-proof treatment;
- electro-galvanised and polyester powder finish: vandal-proof lock.

Optional:

- supplementary modules, with 360° orientation (option) maximum 2;
- increased signalling with a 200 mm diameter traffic light or 2 100 mm diameter traffic lights (optional).

Technical features

Power supply:	230 V mono 16 A + ground
Duty cycle:	100%
Temperature:	-10°C + 55°C
Ventilation:	forced 24 V

Approximate overall dimensions

Steel thickness:	5,5 mm
Standard height without options:	1860 mm
Height of supplementary module:	420 mm
Diameter:	325 mm
Standard colours:	gray RAL 7016

Standard version (without supplementary modules): the lower part of the City 6 body is fitted with: a hinged door with lock, a door with lock to access the emergency button, a trap door with lock to access the printer paper, a broad front piece made of silk-screened polycarbonate, with aluminium counterface, red and orange led traffic lights, diameter 65 mm, special opening keys, sound and thermal insulation. The high part is made up of a removable "hat" which can be oriented 360°.

Upper Module

of the City 6 with its contemporary design, detachable from the inside of the control unit

Supplementary units

can be oriented 360°, and allow for improved signalling and easier to use access. Available in the following versions: 200 mm ø red led traffic light, bi-colour red/orange led 100 mm ø traffic light and neutral front end

Broad front piece

customisable, can be integrated with a high number of accessories: proximity card readers, videos, interphones, displays, printers, coded keypads, bicolour 65 mm ø traffic lights, call button, delivery button...

Lateral printer

door to replace thermal paper roll

"Technical" door

with special anti-vandal hinges, made up of a door for emergency stop with square firefighter lock and emergency button

Internal devices

Pneumatic version:

- LOGO! software manufacturer's programming or U200* card
- Micro-compressor with minimum maintenance for intensive use
- Electric safety devices
- Emergency buttons

Hydraulic version:

- LOGO! software manufacturer's programming
- Hydraulic unit
- Electric safety devices
- Emergency buttons

*The system featuring the U200 card allows:

- management of Urbaco endstops
- management of magnetic coils
- management of dry-contact command devices
- management of negative safety with counter-electrovalve

City 5: the applications

Command and warning device

The command and warning devices are usually associated with a micro technical centre or with access controllers like City 3, 5, and 6. They can be integrated with a high number of command and warning devices (proximity readers, coded keypads, interphone, receiver for radio transmitters, emergency stop button, LED warning traffic lights, ...).

The City 1 controller

can be integrated with traffic lights, command devices and/or functioning logics and a technical management station, located within the cabinet or in the City 3, 5 or 6 controllers, as an integral part of the U100, U200 or Logo! cards.

Technical features

Temperature:	-10°C + 55°C
Ventilation:	natural
Standard colours:	7016 RAL Grey

Approximate overall dimensions:

Thickness of steel:	6 mm
Standard height:	1425 mm
Diameter:	194 mm

A door with lock, a small door with lock to access the emergency stop button (optional)

- Aluminium traffic light front pieces
- Command device front pieces in polycarbonate and counterfaces in aluminium, grille, supports for elements, special opening keys.

Customisable anterior

front piece that can be integrated with a high number of accessories: proximity reader, interphone, coded keypad, ø 65 mm bi-colour traffic light, call button...

Emergency-stop door

with square firefighter lock and emergency button (optional)

"Technical" door

with special anti-vandalism lock

Internal devices

Pneumatic version:

- electric safety devices
- emergency button

SYGMA II Automatic centralisation

The SYGMA II software is the Access Control System for centralising your access-way control with retractable bollards. SYGMA II allows global management of remote devices (bollards, automated operators, cards, videos, interphones...).

SYGMA II

Access Control Management system

SYGMA II

Centralised Technical Management System:

The SYGMA II software is the Access Control System for centralising your access-way control with retractable bollards. SYGMA II allows global management of remote devices (bollards, automated operators, cards, videos, interphones...). It works online using current-day functionalities and communications methods: the SYGMA software can be installed on one or more workstations which are interconnected.

It's made up of various modules:

- NEXUS: the communications core.
- GTC: the Centralised Technical Management module based on a synoptic panel of the controlled zones.
- CASCAM: the access control software with proximity cards.
- ARCHIVES: Numerous management tools for browsing archives and statistical data. Besides administration and maintenance tools.

CASCAM

Access management software with proximity cards:

The CASCAM module (i.e. Safe Access-way Control with Memory card) is a software for managing user card databases. CASCAM also lets you manage from various workstations, thus allowing you to decentralise card retrieval in different offices, as in neighbourhood municipalities. CASCAM's standard version manages 6000 cards per reader, broken down into access groups that define the validity of each card. It also manages provisional read/write cards in which access rights are imputed, allowing for a flexible management of users to specific areas, such as entrepreneurs and artisans. The diffusion of each user's passage rights towards the access-ways is guaranteed by the "NEXUS" communications core and this happens instantly, upon each data input or change. Consequently you can use a "User" badge as soon as it is created.

CASCAM Light

Independent access management software:

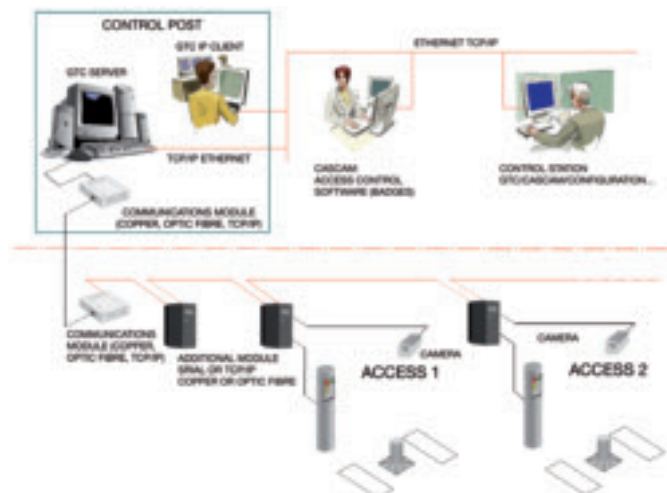

The CASCAM Light software is available separately, and lets you manage 1000 cards per reader, autonomous version for laptop PCs.

Standard configuration Connections and communications

COMMUNICATIONS

The communications among the “NEXUS” communications core and other existing devices can take place using any means of data exchange.

- serial communications
- via TCP/IP (Ethernet, ADSL, WIFI, etc.)
- copper-wire connections
- fibre optic connection
- radio-wave connection
- complete check of ground devices
- global synoptic management (on one or more stations)
- remote access configuration
- information on every access for pre-diagnostic analysis
- centralised technical guide and management of a pedestrian plan on one or more posts via IP connections
- management of users from different posts and without loading.

STANDARD FUNCTIONALITIES

- ergonomic IHMs
- functioning via IP network, remote (Internet) or local
- easy updating
- export via Word, Excel and standard XML
- automatic email
- automatic PDF creation
- management of access rights to IT functions (through supervisory cards or login)
- language change while functioning (22 possible languages)
- 3D visualisation in real time (OpenGL, DirectX) of graphics and accesses
- Conversion to Access, dBase, Texte, Oracle, XML, etc.
- Possibility to use database in: AS/400, Oracle, My SQL, Serveur, Informix, Dbase2, SyBase, Access, Progress, Xase, OLE DB, ODBC, XML.

General synoptics, information on access, events and alarms

Synoptic G.T.C.

The (GTC) synoptic plan allows access to the management and functioning logics:

- Access-way (simple or ticket opening, low tampering rating, etc.)
- Visualisation of the general state of the access-ways (bollard up/down, in motion, coil active or out-of-order, etc.)
- Access-way information, which provide direct diagnosis of the slave devices as a whole (i.e. bollards, PLC control panels, magnetic coils, compressors, traffic lights, emergency stop buttons, clocks, readers, connections, etc.) log of events, alarms and breakdowns. (3D visualisation in real time)
- Configuration of the different parameters and timings of each access-way
- The automatic openings, a function that lets you program the daily time slots openings of access-ways for market days or delivery times
- Managing events and alarms: the log of events displays, in real time, all of the events that take place in the field
- The GTC module can exploit the various functioning stations thus allowing you to manage all or part of the controlled zone from different services and buildings, which thus, share management of the area; for example: a road GTC for the control and maintenance of locations, a GTC at the local police station for timely openings with video and interphone and a GTC at a third party's premises that takes the PM connection for the night.

LOG OF EVENTS:

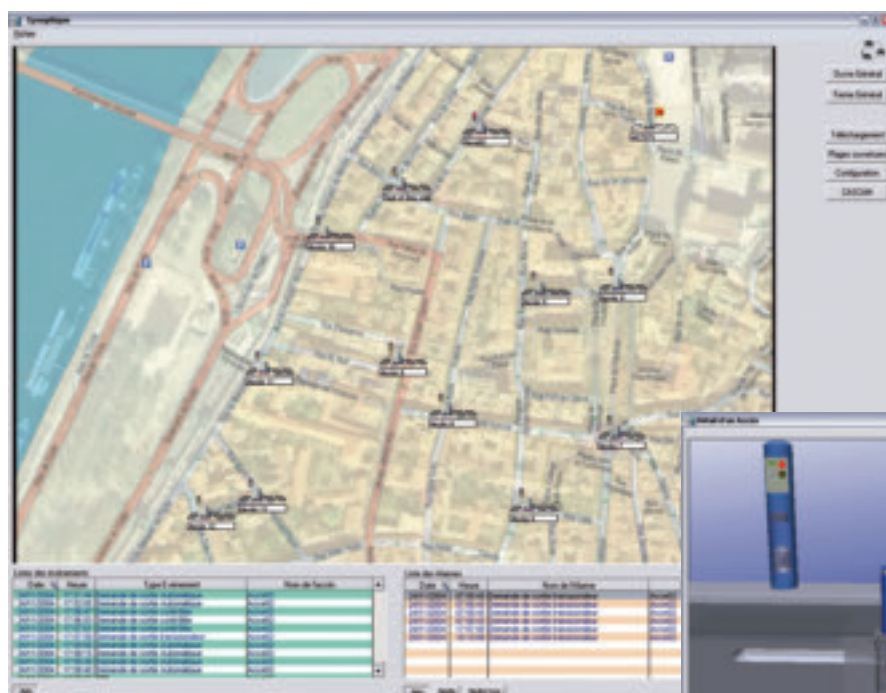

The log of events displays, in real time, all of the information coming from the field, providing a detailed picture of the access-way's in question proper functioning.

Date	Heure	Type d'événement	Nom de l'accès
24/11/2004	17:51:44	Demande de sortie Automatique	Acces02
24/11/2004	17:52:05	Demande de sortie Automatique	Acces02

24/11/2004	17:57:01	Demande de sortie contrôlée	Acces02
24/11/2004	17:57:59	Demande de sortie transpondeur	Acces02
24/11/2004	17:58:06	Demande de sortie Automatique	Acces02
24/11/2004	17:58:15	Demande de sortie Automatique	Acces02
24/11/2004	17:58:36	Demande de sortie Automatique	Acces02
24/11/2004	17:59:40	Demande de sortie Automatique	Acces02

LOG OF ALARMS:

The log of alarms displays, in real time, any alarms coming from the field, allowing you to quickly establish an initial diagnosis as concerns the working cycle of the access-way in question.

Date	Heure	Nom de l'Alarme	Nom de l'accès
24/11/2004	07:58:45	Demande de sortie transpondeur	Acces02
24/11/2004	07:58:45	Demande de sortie transpondeur	Acces02
24/11/2004	07:58:45	Demande de sortie transpondeur	Acces02
24/11/2004	07:58:45	Demande de sortie transpondeur	Acces02
24/11/2004	17:57:59	Demande de sortie transpondeur	Acces02
25/11/2004	18:10:08	Demande de sortie transpondeur	Acces02

Files and statistics

FILES AND STATISTICS

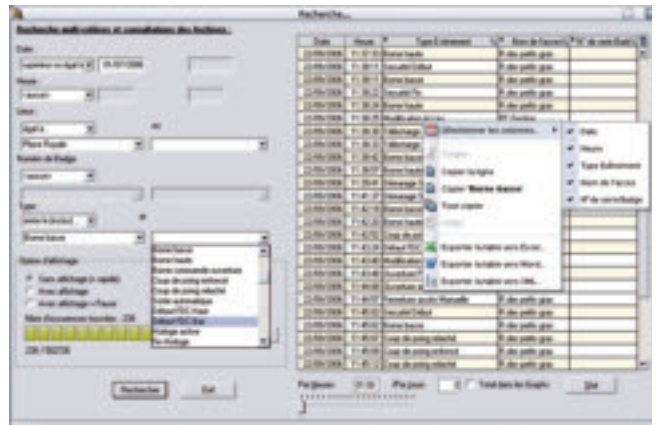

Files and statistics

The “File” program allows you to extract files, which correspond to different criteria, from the events software. Such events may derive from different access-ways or from the PC itself. Once the events search has been made, the “Statistics” function allows you to make an hourly or daily count of anything found and to visualise a general, graphic display of the results.

SOME FIGURES

- Number of in- and out- access: 65, 535.
- Number of cards per reader: 6,000 (increasable to 12,000).
- Number of users (65, 535 x 6,000): practically unlimited (393 Mio).
- Number of events and alarms (increasable): 70 different ones.
- Maximum number of stored events: practically unlimited.

SUMMARY/CONCLUSION

The Sygma II software provides:

- Complete control of the ground devices.
- Remote configuration of access-ways.
- Centralised, technical management and monitoring of a pedestrian plan on one or more stations via IP connections.
- Information for each access-way for a quick, pre-diagnostic analysis.
- Statistical choice and treatment of events for improved system management.

Mechanical, retractable bollards

Example of a mechanical bollard

1. Unlock

2. Push

3. Release

Mechanical retractable bollards are made to manage both public and private roads. Their movement is activated by a key which unlocks the mechanism. By pushing the bollard head downwards, the bollard retracts below ground; it then automatically locks into the retracted position. Then, by turning the key, the bollard surfaces and locks into the fully surfaced position.

Generation 6 Mechanical, retractable bollards

Invented in 1984 by Urbaco, retractable bollards are used in a variety of settings, all having a common denominator, that is, the management of one or more access-ways. Restricting a parking area, restricting a delivery zone, restricting urban flows, anti-intrusion security for sensitive sites or buildings, embassies or private homes.

Génération 6

The sixth generation of Urbaco retractable bollards is the result of over 20 years of experience. These bollards are made of only three elements: case, cover and bollard head, each is cast into a single nodular cast-iron piece, has no wearable components, features the Urbaco Monobloc® patent. The mechanical, retractable bollard must not be installed where vehicle normally pass.

Compliant with
French Law NFP98-310

Example of a mechanical bollard

1. Unlock

2. Push

3. Release

Models

Offered in two different models. Made of nodular cast-iron, with an average thickness of 11 mm, for the Châteauneuf, Acropole, Cylinder, Athéna models. Made of nodular cast-iron + Inox 316L with a thickness of 9 + 1.5 mm for the Vendôme model.

- 3 diameters: 120 mm, 200 mm, 250 mm
- 2 heights: 500 mm, 750 mm

Warnings

Display device with a white, Class II reflective band (the Vendôme model uses a yellow band)

Surface finish and colours

Zinc is the primary standard coating which provides better adherence for the finishing coat, using a powder based, polyester thermo-hardening matt varnish, in standard RAL 7016 dark grey

Bollard head

Cast into one block, it houses its own sliding rail and is designed to slide without ever wearing down. Does not require any periodic maintenance nor adjustments. The nodular cast iron gives it great endurance

Cover

It helps preserve the bollard, its long cladding distributes the bollard's energy into opposite components, transmitting it to the buried foundation box. A thick plastic ring eases the sliding of the bollard body, thus reducing friction and noise

Foundation box

With a thickness of up to 24 mm, it is fitted with 4 guides and an integrated cross bar which holds a gas operated spring in place. This ensures that the guide rails will not deform

Protective dome

For the key-insertion system

Inox release rod

Different prints are available

Gas-operated spring

Makes the bollard re-surface after the key mechanism is released

Lost casing

Urbaco's lost casing, made of 1.5 mm thick galvanised, metal sheeting is delivered already folded. This allows you to save space and makes for easier maintenance and stocking. Its easy mounting is indispensable for optimal installation

Ovalie Mechanical, retractable bollard

Operation

The mechanical, retractable bollard is activated by a key which release the mechanism. By pressing on the head of the bollard, it automatically retracts and automatically locks into the 'down' position. Then, by turning the key, the bollard re-surfaces by itself and locks into the 'up' position. The wear-resistant, sliding rolling release mechanism (an Urbaco patent), is made up of an inox release rod and a block arm. A small, bronze door protects the lock.

Compliant with
French Law NFP98-310

Example of a mechanical bollard

1. Unlock

2. Push

3. Release

Case

With a thickness of up to 24 mm, it is fitted with 4 guides and an integrated Monobloc bar which holds a gas-operated spring in place. This ensures that the guide rails will not deform

Surface finish and colours

Zinc is the primary standard coating which provides better adherence for the finishing coat, using a powder based, polyester thermo-hardening matt varnish, in standard RAL 7016 dark grey

Lost casing

Urbaco's disposable folding case, made of 1.5 mm thick galvanised, metal sheeting is delivered already folded. This allows you to save space and makes for easier maintenance and stocking. Its easy mounting is indispensable for optimal installation

Foundation scheme

Schematic representation for installing the lost casing for automatic or mechanical bollards. It is delivered folded and takes two minutes to install.

Advantages:

- takes up less room and requires little maintenance and room when stocking
- cuts back on transport costs
- it is easy to mount

Technical features:

- made of 1,5 mm thick galvanised steel.

The Tradition series, the direction of circulation is indicated on the bollard case, while for the G6 series it is shown on the cover.

Fixed and removable bollards

Example of a removable bollard

1. Unlock

2. Turn

3. Lift

Fixed bollards and posts are used in both public and private settings to restrict traffic flows, parking or simply to protect areas from vehicle access. Urbaco uses cast iron, steel and inox steel to make its products.

The Fixator® system, an Urbaco patent

Removable bollards and posts are a simple, economical and effective way of managing access-ways that are only occasionally opened. The Urbaco patented Fixator® system consists of manually removable bollards and posts. The Fixator® and the cover are sold separately from the bollard. The male sleeve (the lower part) can be purchased separately to create removable posts and supports.

By turning the key, the bollard is released and can be removed from its housing. The Fixator® cover is replaced at the end to free both the way and the area. The Fixator® is installed in cement at the same level as the upper part. The impact resistance of these products depends on how well the Fixator® has been fixed to the ground.

Generation 6 Fixed and removable bollards

Fixed bollards and posts are used in both public and private settings to restrict traffic flows, parking or simply to protect areas from vehicle access. Urbaco uses cast iron, steel and inox steel to make its products. Removable bollards and posts are a simple, economical and effective way of managing access-ways that are only occasionally opened. They are identical in shape and dimensions to automatic retractable and mechanical bollards. Removable bollards allow you to easily coordinate the aesthetics in terms of both access-way control in public and private areas and for urban setting management. The 120 mm diameter Chateaufort version is also available with the rounded top which smoothenes the originally squarish lines. The control units also conform to the fixed, energy dispensing posts.

Example of a removable bollard

1. Release

2. Turn

3. Remove

Models

5 different models are offered. Grey cast iron or nodular cast iron, with an average length of 11mm, for the Chateaufort models.
- 3 diameters: 120 mm, 200 mm, 250 mm
- 2 heights: 500 and 750 mm for the Chateaufort models (rounded top)

Surface finish and colours

Zinc is the primary standard coating which provides better adherence for the finishing coat, using a powder based, polyester thermo-hardening matt varnish, in standard RAL 7016 dark grey

The Urbaco patented Fixator® system consists of manually removable bollards. Once the bollard has been removed, a cover frees the way and area. The Fixator® is cemented to the ground. Its resistance to impacts depends on how well it is fixed to the ground and the dimensions of the installation area

Ovalie

Fixed and removable bollards

Fixed bollards are used in both public and private settings to restrict traffic flows, parking or simply to protect areas from vehicle access where these are not authorised. Urbaco uses cast iron, steel and inox steel to make its products. Removable bollards and posts are a simple, economical and effective way of managing access-ways that are only occasionally opened.

Ovalie

This model, with its modern, simple design fits perfectly into any urban setting. It essentially features an oval shape which gives it an elegant silhouette, which fully respects Urbaco's solidly built product.

Arlesiennes Fixed and removable bollards

Fixed bollards are used in both public and private settings to restrict traffic flows, parking or simply to protect areas from vehicle access where these are not authorised. Urbaco uses cast iron, steel and inox steel to make its products. Removable bollards and posts are a simple, economical and effective way of managing access-ways that are only occasionally opened.

Arlésiennes

Architects prefer this model, for French buildings due to its timeless, classic yet contemporary design. Urbaco's Arlesienne bollard, already installed in several prestigious sites, can also be fitted with a chain.

Cabestan Fixed and removable bollards

Fixed bollards are used in both public and private settings to restrict traffic flows, parking or simply to protect areas from vehicle access where these are not authorised. Urbaco uses cast iron, steel and inox steel to make its products. Removable bollards and posts are a simple, economical and effective way of managing access-ways that are only occasionally opened.

Cabestan

The particularly attractive and original shape of the Cabestan model make it a “best seller” among the classics. It comes in several heights and is especially suited and appreciated by coastal cities for use on waterfronts, ports, dams and other waterways, canals and lakes.

Vendôme Fixed and removable bollards

Bollards are used in both public and private settings to restrict traffic flows, parking or simply to protect areas from vehicle access where these are not authorised. Urbaco uses cast iron, steel and inox steel to make its products. Removable bollards and posts are a simple, economical and effective way of managing access-ways that are only occasionally opened.

Vendôme

The Vendôme model is ideal in modern, contemporary architectural settings. It fits perfectly in historical town centres and areas subjected to corrosive agents. It is also ideal for indoor decorating.

Mistral

Fixed bollard

Bollards are used in both public and private settings to restrict traffic flows, parking or simply to protect areas from vehicle access where these are not authorised. Urbaco uses cast iron, steel and inox steel to make its products. Removable bollards and posts are a simple, economical and effective way of managing low-volume access-ways on a low budget.

Mistral

Its sombre, neutral design and its perfectly smooth surface make Mistral the model which discretely fits into any context, regardless of any architectural or urban planning requirements. Discretion and efficacy are its strong points.

Surface finish and colours

Zinc si the primary standard coating which provides better adherence fo the finishing coat, using a powder based, polyester thermo-hardening matt varnish, in standard RAL 7016 dark grey

One model, two different aesthetic approaches: flat top, rounded top. The Mistral bollard is employed to protect shop windows and glass panes against ramming vehicles. Thanks to its structure, the part below ground is as important as the one above ground.

Street furniture

The Urbaco range of outdoor furniture is made up of posts, benches, litter bins and tree-grilles made to easily and harmoniously fit into any urban setting.

Rond à Boule (Rounded ball-topped) Fixed and removable posts

A timeless classic, elegant, discreet and sombre, the Rond à Boule model can be used alone or as a barrier support... suitable for any setting, it couples well with any pre-existing urban décor, or with other ranges, tying it all together from an aesthetic point of view. It's height guarantees high-visibility for pedestrians and drivers. The reduced overall dimensions on the ground leaves more space for pedestrians.

New

Automatic flower pots

This is the mobile barrier which is revolutionising the closing systems of restricted access pedestrian zones, allowing easy access to authorised people and vehicles, when retractable bollards cannot be installed. It is made to be compliant with the current laws, and complies with CEE 98/37 machine directive and CE law. It is protected by an Italian and international patent. With automatic, or manual opening, you may choose among a vast range of models which differ amongst themselves in terms of aesthetics and type of application.

94

Automatic flower pots		
Model	230V motor	24V motor
Concrete Flower pot	MJOTTN0A1	MJOTTN0A2
Concrete support + steel barrier	MJOTTA0A1	MJOTTA0A2
Steel support can be customised upon request	MJOTTP0A1	MJOTTP0A2

Option for customisable pot: code art. COJARD

The flower pot is available in the manual version as well

1. Manual release system

2. Released flower pot

3. Blocked flower pot

The latest to be born of the line, it features a new octagonal design of its pivot pin and flower pot. It is perfectly suited for historical town centres while blending in perfectly with modern architectural settings. It is delivered already assembled and wired, and works via radio command and is ready to connect up to the main power cable. It is equipped with an autonomous security system: a highly luminous LED signalling and acoustic warning system, courtesy photocells which trigger the inversion of direction when an obstacle is present, plus is also has mechanical safety endstops.

Total weight	485 Kg	

New

Urbaflow, electromechanical turnstile with tripod arm

Urbaflow is an electromechanical tripod turnstile having a sombre design and contained dimensions. A simple yet effective conveying system to control pedestrian flows. It can be programmed so as to allow access only to those users who insert a coin, token, ticket or who use a magnetic card. Urbaflow is equipped with a counter to log the number of passages. After paying the predetermined amount, the turnstile automatically releases thus giving access (such as in public transport); it can also be used to restrict access only to authorised persons (i.e. entrance to reserved areas). In gyms, sports centres, swimming pools, fitness centres or game parks, the turnstile is normally managed by a magnetic or optical reader to clear the ticket. It can also be activated by person who check tickets.

Resistant structure and easy application

Resistant structure and easy application

- Rounded corners and edges for an ideal and safe automation in any context
- Structure resistant to any tampering and vandalism
- Top cover fitted with a key lock. The internal part is ready to house electronic control gear
- Removable structure shoulders with open cover to facilitate installation
- Standard supply 24V D.C. transformer

Advanced functions and ease-of-use.

- Selective bi-directional mechanism with hydraulic decelerator which slows down the rotation to limit the stop
- Its command logic is ready to monitor passages upon a release signal
- Automatic release of the tripod in case of black-outs
- Mechanism, programme and control logic are located inside the easy-access cover. Its control logic is compatible with various command accessories such as: control panel, token slot, magnetic/proximity reader or other
- Device which prevents rotation inversion

A mechanical device which ensure a complete rotating cycle

Turnstile with tripod arm	MTURBFA1

New

Public Ashtray

A sombre design to place attention on the product's functionality. Its elegant shape, which reminds of the silhouette of a cigarette, discreetly fits into any smoking designated setting! Its shape and materials are suitable for any urban context, whether modern or classic. Made of 304L stainless steel, this outdoor ashtray is offered in two versions, bollard or wall mounted.

Outdoor ashtray				
Model	Diameter	Height from the ground	Weight	Code
Bollard version	140 mm	1100 mm	13,1 kg	CENDINOX
Wall-mounted version	140 mm	600 mm	6,5 kg	CENDINOXM

Key for energy dispensing units

Service and personalised keys

The Tradition and Génération 6 mechanical, retractable bollards are made up of four elements: the case, cover, sliding rail and bollard head, each being die-cast into a single piece of nodular cast iron. An Urbaco Monobloc® patent.

Energy dispensing units

Invented by Uraco, the Energy dispensing posts can be either fixed or retractable and provide power, liquids or utilities: water, telephone, compressed air, cable TV, etc.. Doing away with any surface cables, they ensure safety for authorised users.

Two models:

- Retractable energy dispensing posts
- Fixed energy dispensing posts

Retractable energy dispensing bollards

The BRDE Energy Dispensing Retractable Bollard was invented by Urbaco to simplify energy distribution and to free the area after use. It provides electricity, telephone lines or water dispensing.
